Flint's water became contaminated with lead. This occurred because of a switch of water source. It occurred for months.

They coped with this problem by using bottled water and being careful not to use the tap. The persistence was it happened every few days,

The symptoms were hair loss, teeth falling, weakness, and brain damage. The local authorities worsened the problem by denying it.

The long-term solution is switching the water source back to the lake. The federal government can get people to donate water bottles.

The technologies incorporated were the water filtration systems. The obstacles of solving this issue was financial issues.
